

Track epidemics and pandemics quickly and effectively

Experts agree that it is not a matter of "if" but rather "when" the next epidemic or pandemic will strike. The need for vaccines will be of major importance as the population struggles to maintain daily resources affected by the various stages of illness. Vocantas solutions will enable those who are monitoring the health of large institutions or organizations to proactively establish the current status of illness with a series of brief, automated and privacy compliant questions.

Track Illness within a Large Group Quickly and Safely

As each person responds to the specifically designed questions their responses are automatically tracked and logged into the system providing you with real time access to accurate, detailed reports which can improve your ability to effectively execute emergency plans with limited resources. Questions have been designed with direct involvement by healthcare providers to eliminate "false positives".

Accurate Statistics Enable Prompt Trending of Illness Progression

This proactive approach can reduce the risk of infection as surveys do not involve face-to-face interaction. You will gain important statistics to improve your ability to respond to a health crisis. As trends in illness progression are promptly identified, you will be able to make informed decisions as well as maintain accurate records for audit, review and reporting processes.

Privacy Compliant with Minimal to No IT Footprint

Compliant to US and Canadian privacy standards, the system uses only unique identifiers and telephone numbers to reach people in confidence. Administrator control gives you the power to establish or change access rights for multiple users. Your designated personnel can choose to enter data manually or use the fully automated data import feature.

"This system allows us to quickly and accurately gauge our residents' health status, and has enhanced our ability to effectively respond in the event of an epidemic or pandemic. Vocantas proficiency with healthcare applications has proven to be highly instrumental in the successful implementation of the system."

~ Robert Gillett, President of Algonquin College, Ottawa, ON

CallAssure is a turnkey solution that can be easily integrated with your existing infrastructure or securely hosted by Vocantas.

Remote monitoring options are also available to ensure that the system is operational at all times, incurring no burden on your IT resources.

Vocantas is a developer of interactive voice response solutions (IVRS) that use advanced computer telephony and speech technology to provide its customers with cost-effective outreach solutions. The company's easy-to-use, turn-key solutions offer customizable core features and optional enhancements that integrate seamlessly with existing systems. Its products have particular application in the healthcare, utilities and customer service environments where they have been proven to increase efficiencies while minimizing operational costs. CallAssure, an IVRS optimized for hospitals to follow-up on discharged patients, has recently completed clinical trials in North American hospital environments with favourable results.
